

Advantages of using Readymix Concrete

October 2011

The Southern Africa Readymix industry is represented by SARMA (Southern Africa Readymix Association).

When using a product such as concrete it is important to meet deadlines and therefore Sarma members can be contacted to arrange delivery of a quality product, which has undergone a full audit for issues such as Safety, Health, Road transport, Environment and Quality compliance.

Sarma audits its member's readymix plants once a year for the above. Some issues such as Safety and Health could affect the employees. The trucks that proceed onto the roads to deliver the product are also checked. Any impact such as environmental issues are audited which includes water, dust and spills on the roads. Then the most important issue is that of the quality of the product. This also counts the most points in the audit, i.e. 50%.

Time Saving

Many firms still use concrete which has to be mixed on site. Unfortunately this can be a time consuming job and means valuable members of the team are taken away from other jobs that they could be doing. With readymix concrete this isn't the case.

Instead, all that's required is for you to place your order with us, informing us of how much you require and by when and we'll do the rest.

Large Quantities Available

When mixing concrete on site, you may be limited by how much you can have at any one time by the ingredients you have available. With readymix concrete from a Sarma member, you can receive as much or as little as you require at any one time to get your job completed.

Quality Guaranteed

Anyone who has previously mixed concrete for a variety of jobs will understand that too much of one ingredient or not enough of another can have serious consequences. With readymix you don't have to worry about this as it all comes with SHREQ quality assured, meaning it reaches the high standards you'd expect,

Next time that you're carrying out construction work, no matter how big or small, don't waste time hand mixing concrete. Instead contact a Sarma member and receive quality readymix concrete on site as and when required.
